Hiring Manager
Enterprise AI Squad
Australian Unity

Dear Hiring Manager,

I am writing to express my strong interest in the **Senior AI Enablement Engineer** position at Australian Unity. As a technical leader with a Master of Business Analytics and deep experience in deploying AI solutions within highly regulated environments, I am excited by the prospect of helping Australian Unity become an AI-native enterprise. I thrive at the intersection of complex technical engineering and product-style delivery—translating real-world business needs into high-impact, transparent, and fair AI outcomes.

In my current role as Lead of Intelligence and Analytics at Bendigo & Adelaide Bank, I have spent the last five years delivering end-to-end AI and analytics products. My background aligns directly with the "product-oriented" technologist profile you are seeking:

Practical AI/LLM Implementation: I have hands-on experience applying LLM and NLP technologies to solve high-stakes business problems. I recently co-designed an automated regulatory reporting pipeline using LLMs, which reduced preparation time by 80% while maintaining 99.9% data integrity. This required me to move beyond simple technical execution—identifying the opportunity, shaping requirements, and managing the solution through to delivery and post-launch support.

Governance, Fairness, and Risk-Awareness: Working in Financial Crime Risk has made me a "risk control-first" engineer. I have deep experience evaluating model behaviour, reducing false positives, and ensuring that automated detection scenarios align with strict fairness and transparency standards. I am comfortable challenging assumptions—whether from internal stakeholders or external vendors—to ensure that AI models meet rigorous compliance and performance benchmarks.

Translation and AI Literacy: As a Deakin University alumnus who has tutored over 100 students in Python and SQL, I pride myself on my ability to simplify complex AI concepts for non-technical audiences. I understand that AI adoption is as much about human confidence and literacy as it is about technical performance. I am eager to contribute to Australian Unity's AI literacy and change initiatives, building confidence within the People & Culture function.

I am drawn to Australian Unity's commitment to well-being and community, values that resonate with my own approach to ethical AI development. I am excited by the freedom this role offers to shape the evolution of enterprise-level AI practices. I look forward to the possibility of discussing how my blend of hands-on AI engineering and product-driven leadership can deliver measurable value to your business squads.

Thank you for your time and consideration.

Warm regards,

Quoc Anh Trinh (Andrew)
