Hiring Manager
Group Risk Team
People First Bank

Dear Hiring Manager,

I am writing to apply for the **Risk Analytics & AI Enablement Specialist** role within People First Bank's Group Risk team. With over five years of data analytics experience in Australian banking and FinTech — including my current role at Bendigo & Adelaide Bank — I bring a proven track record of delivering exactly the kind of data-driven, AI-powered risk solutions this role calls for.

What draws me to People First Bank is the purpose behind the work. As Australia's leading mutual bank serving over 700,000 members, People First Bank is building something genuinely different — a modern, digital-first institution with deep community roots and a vision to deliver positive change through banking. I am particularly energised by the bank's current phase of technology investment and the ambition to bring innovation into risk management in a meaningful way. That ambition aligns closely with the work I have been doing and the direction I want to take my career.

In my current role leading the Intelligence and Analytics function within Financial Crime Risk, I have built and delivered solutions across the full spectrum of what this role requires:

Data analytics and dashboarding: I designed and maintain Power BI dashboards that eliminated 70% of ad-hoc reporting requests and reduced alert prioritisation time by 60%, directly serving operations, transformation, and governance teams — the same stakeholder landscape this role involves.

AI and automation: I co-designed and automated the UAR-to-SMR regulatory reporting pipeline using Large Language Models, NLP, Python, and SQL — reducing reporting preparation time by 80%. I also built an AI-driven typology and indicator management platform that extracted and structured 156 AUSTRAC documents into 198 actionable typologies and 300+ indicators, forming the foundation for a modern data-led monitoring framework.

SQL and Python proficiency: From engineering vendor-agnostic transaction monitoring scenarios processing 150+ daily alerts with 99.9% data integrity, to building automated workflows that replaced manual transfers entirely, I apply coding to solve real operational problems — not just analyse them.

Risk domain experience: Having worked within financial crime risk, compliance, and assurance at a major Australian bank, I understand the stakes of getting risk analytics right. I have led annual performance reviews using statistical calibration to reduce false positives and remove unnecessary alerts, saving over 300 investigation hours annually.

Process improvement and transition support: I led the engineering of interim SQL-based monitoring during Bendigo Bank's exit from its legacy platform, maintaining 100% compliance continuity across 2 million+ transactions — exactly the kind of BAU-critical, high-stakes delivery this role will involve.

I am genuinely curious about emerging technology and actively apply it: I have worked with LLMs,

vector databases, agentic AI pipelines, AWS Glue, and Redshift in production environments. I hold a **Master of Business Analytics from Deakin University** and complement my formal qualifications with continuous self-directed learning and practical application — including tutoring over 100 students in SQL and Python and winning two GovHack hackathon prizes.

I would welcome the opportunity to discuss how my background can support People First Bank's Group Risk team. Please find my resume attached. I am available at your convenience for an interview.

Thank you for considering my application.

Warm regards,

Quoc Anh Trinh (Andrew)
