Hiring Manager
Risk Analytics & Reporting — Group Risk
People First Bank

Dear Hiring Manager,

I am writing to apply for the newly created **Risk Analytics & AI** role within People First Bank's Group Risk team, reporting to the Head of Risk Analytics & Reporting. Over five years in Australian banking and FinTech — currently leading the Intelligence and Analytics function within Financial Crime Risk at Bendigo & Adelaide Bank — I have delivered exactly the analytics, automation and AI-enabled capability this role is designed to drive, working at the intersection of risk, data and emerging technology that this position sits squarely within.

What draws me to People First Bank is the chance to help define a brand-new capability at a values-driven mutual that is big enough to make an impact yet agile enough to do genuinely interesting work — shaping how AI, automation and advanced analytics strengthen risk capability across the Bank from the ground up.

AI and agents: I co-designed an end-to-end AI-driven UAR-to-SMR regulatory reporting pipeline using LLMs, NLP, Python and SQL — with secure data masking and validated prompting — cutting reporting preparation time by **80%**. I have also built production agentic AI solutions (enforcement-action checkers and typology extractors on FastAPI/GCP with vector search), the same agent-building discipline behind MS Copilot and Databricks, with hands-on Spark/PySpark that translates directly to a Databricks lakehouse.

Dashboards and process automation: I own the Power BI dashboards in our transaction monitoring product, eliminating **70%** of ad-hoc requests and cutting prioritisation time by **60%**, and built automated daily workflows processing **150+** alerts at **99.9%** integrity — practical automation I am keen to extend across the Power Platform's BI, Automate and Apps.

Risk, governance and process improvement: Working across financial crime risk, compliance and assurance, I embed governance and controls into emerging-technology and AI solutions — including the privacy and transparency controls built into my LLM pipelines. I led the annual monitoring performance review using statistical calibration to remove **5,000+** unnecessary alerts and save **300+** hours a year, and engineered interim SQL monitoring that held **100%** compliance continuity across **2M+** transactions during a platform exit.

I am also beginning a formal research journey on a topic closely aligned with this role — **AI for compliance** — reflecting how seriously I take both the opportunity and responsibility of bringing AI into regulated risk work. Alongside my **Master of Business Analytics from Deakin University**, I enjoy being a trusted advisor and champion of innovation, and bring genuine facilitation strength, having tutored over **100 students** in SQL and Python.

I would welcome the opportunity to discuss how my background can help People First Bank build its future risk-analytics and AI capability. My resume is attached, and I am available at your convenience.

Thank you for considering my application.

Warm regards,

Quoc Anh Trinh (Andrew)
