To the Uniware Hiring Team,

I was particularly excited to see the Software Engineer – AWS DevOps role at Uniware Managed Services, especially the emphasis on **AI-assisted development**. As a builder who has integrated AI-assisted coding tools into my daily workflow for over 18 months, I have experienced firsthand how these tools accelerate the delivery of robust, production-grade cloud software.

In my current tenure at Bendigo & Adelaide Bank, I leverage AI agents to architect and deploy complex data solutions within regulated banking environments. My background aligns directly with Uniware's core requirements:

- **AI-Assisted Development:** I use generative AI for everything from initial architectural scaffolding to complex debugging and unit test generation. This practice enabled me to co-design and deliver an **AI-driven UAR-to-SMR pipeline** implementing secure **data masking/rehydration** and **Pydantic-validated LLM prompting**; this reduced regulatory reporting preparation time by **80%**, shifting the team's focus to high-value analysis.
- **AWS & Cloud Operations:** I have extensive experience building scalable pipelines using **AWS Glue** and **Redshift**, and recently architected a multi-tenant platform using **FastAPI** and **Next.js** on **GCP**. My work involves building vendor-agnostic scenarios and automated daily workflows that process 150+ alerts with **99.9% integrity**, demonstrating my comfort with secure, modern DevOps practices.
- **Python & API Design:** I specialize in designing Python-based API services and **Agentic AI solutions**. I recently engineered a typology extractor that transformed 156 complex AUSTRAC documents into structured data, establishing high-performance governance for national monitoring.

Uniware's focus on leveraging cutting-edge tools to drive ERP, WMS, and Ecommerce platforms matches my ambition to build software that is not just functional, but intelligent. My experience in financial crime risk has instilled a "security-first" mindset, ensuring that the automations and cloud infrastructures I build are as resilient as they are efficient.

I am eager to bring my unique combination of AWS/Python proficiency and advanced AI-assisted development skills to the Uniware team. Thank you for your time and consideration. I look forward to discussing how I can help shape the next generation of intelligent software solutions at Paperless Warehousing.

Sincerely,

Quoc Anh Trinh (Andrew)
