Hiring Manager
Financial Crime Detection
Westpac Group

Dear Hiring Manager,

I am writing to express my strong interest in the **Senior Analyst – Transaction Monitoring & Analytics** role within Westpac's Financial Crime Detection function. I currently own the transaction monitoring analytics function in the Financial Crime Risk unit at Bendigo & Adelaide Bank, where my work centres on exactly what this role describes: sharpening detection rules, improving data quality, and building analytics pipelines that turn business and regulatory needs into risk-based outcomes. Strengthening financial crime detection through advanced analytics is precisely the work I want to keep doing, and to do at greater scale.

Improving and supporting detection rules is the core of my current role. I researched and designed **9 new** detection scenarios and fine-tuned monitoring for Child Exploitation, Sextortion, Drug Trafficking, and Terrorism Financing typologies—using statistical calibration, genetic algorithms, and trend modelling to reach **60–70% true positive rates** while cutting alert volume by **67%**. My annual review of the scenario suite applied confidence testing and SQL-based recalibration to remove **5,000+ unnecessary alerts a year**, saving over **300 investigation hours**—continuous, risk-based optimisation of a live TM environment.

I also have deep hands-on experience across large, complex datasets and the pipelines that feed them. I built SQL- and Python-based scenarios outside vendor platforms with automated daily workflows processing **150+ alerts a day at 99.9% data integrity**, and engineered an interim monitoring function that held **100% continuity across 2M+ transactions** with zero compliance breaches during a core-system transition. My primary stack is advanced SQL and Python; while my recent pipeline work has been on BigQuery and dbt rather than SAS and Teradata, I ramp quickly on new data platforms and would apply the same rigour to Westpac's TM environment.

Just as important is translating technical work for the people who act on it. I own the Power BI dashboards for our transaction monitoring product—delivering the KPIs, guardrails, and measures that operations, compliance, assurance, and governance teams rely on, which removed **70%** of recurring ad-hoc requests. I work across cross-functional teams daily and take accountability for delivery: **100% on-time** reporting with consistent **8/10+** stakeholder satisfaction.

I would welcome the chance to bring this experience to Westpac and to help embed best-practice analytics across the Financial Crime Detection function. Thank you for your time and consideration.

Warm regards,

Quoc Anh Trinh (Andrew)
