Hiring Manager
Data Science Team
HESTA

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the **Data Scientist** position at HESTA. As a purpose-driven analytics leader with a Master of Business Analytics and a proven track record in deploying Generative AI and machine learning solutions, I am inspired by HESTA's mission to deliver better retirement outcomes for members with real-world impact. I thrive at the intersection of cutting-edge technology and meaningful social purpose, making this 12-month opportunity a natural fit for my skills and values.

In my current role as Lead of Intelligence and Analytics at Bendigo & Adelaide Bank, I have been driving AI innovation through end-to-end data science products. My experience directly aligns with HESTA's key objectives:

Driving AI and Generative AI Innovation: I have successfully leveraged LLMs and NLP to solve complex business problems, notably co-designing an automated regulatory reporting pipeline that reduced preparation time by 80%. I am comfortable maintaining traditional predictive models while simultaneously exploring the frontiers of Generative AI to uncover patterns and opportunities that enhance organisational performance.

Building Production-Grade Solutions: I have deep experience deploying scalable, end-to-end solutions from concept to production. I apply modern software development practices—including Git, Docker, and CI/CD—to ensure that data delivery solutions are robust and reproducible. My background in developing cloud-based processes (GCP and AWS) ensures I can contribute effectively to your infrastructure-as-code initiatives.

Actionable Insights and Stakeholder Partnering: I believe that technical excellence is only as valuable as its ability to inform decision-making. I have a long-standing commitment to "communication excellence," having tutored over 100 students in SQL and Python and frequently presenting "executive-ready" briefings to senior stakeholders. I excel at translating complex technical findings into clear recommendations that support evidence-based decision frameworks.

Having spent over five years in the Australian financial services sector, I understand the unique responsibility of protecting and growing members' wealth. I am an advocate for inclusion and collaboration, and I am proactive in managing risk—a trait honed in my current role within Financial Crime Risk. I am eager to apply my technical rigour and "AI-first" mindset to support HESTA's diverse community of more than one million members.

I am ready to step into this role and make an immediate impact on your data-led decision-making capability. I look forward to the opportunity to discuss how my background in finance, AI innovation, and robust engineering can support HESTA's mission.

Thank you for your time and consideration.

Warm regards,

Quoc Anh Trinh (Andrew)
