Hiring Manager
Systematic Equities Team
AustralianSuper

Dear Hiring Manager,

I am writing to express my strong interest in the **Analyst (Systematic Equities)** position at AustralianSuper. With a Master of Business Analytics and over five years of experience in leading data-driven functions within the Australian banking sector, I am drawn to this role because of the opportunity to apply software engineering and quantitative research to deliver superior outcomes for your millions of members. I thrive at the intersection of complex financial data management and production-quality code.

AustralianSuper's reputation for supporting member-first outcomes through a high-performance environment underpinned by a strong risk culture deeply resonates with my professional values. I am particularly attracted to the Systematic Equities team's focus on managing diverse listed equity strategies and the strategic goal of reducing external management costs. I am eager to contribute to a team that values both technical rigour and the diverse needs of its colleagues.

In my current role as Lead of Intelligence and Analytics at Bendigo & Adelaide Bank, I manage the full data lifecycle for complex, large-scale datasets. My experience aligns directly with the "Analyst" requirements:

Advanced Data Management and Ingestion: I have extensive experience working with "dirty" and complex datasets. I have designed and executed robust data processes for the ingestion and transformation of millions of transactions, ensuring 99.9% data integrity across vendor-agnostic pipelines. I am adept at identifying data quality issues and building automated tools to mitigate them, which is essential for ensuring the reliability of financial markets data used in research and trading.

Engineering Python and SQL Solutions: I apply Python and SQL daily with a focus on data science and best practices. I am well-versed in version control, unit testing, and code optimisation—essential skills for maintaining a production-ready quant codebase. My achievements include co-designing and automating regulated reporting pipelines that reduced prep time by 80%, demonstrating my ability to automate day-to-day activities while maintaining high standards of software engineering.

Risk Culture and Governance: Coming from a Financial Crime Risk background, an obsession with risk controls and adherence to policies is in my DNA. I understand the importance of implementing strong controls on processes, systems, and workflows to ensure adherence to organisational standards. I am comfortable working in and administering cloud environments (AWS/GCP), which supports both the scale and security required for institutional funds management.

Collaboration and Communication: I have a proven history of partnering with operational, investment, and IT teams to translate complex business needs into technical solutions. Whether dealing with internal stakeholders or external data vendors, I pride myself on delivering clear, decision-ready insights and fostering a collaborative environment.

I am genuinely excited about the prospect of bringing my technical expertise in data engineering and my passion for quantitative analysis to the Systematic Equities team. I look forward to

discussing how my background in financial data and software engineering can support Australian-Super's mission.

Thank you for your time and consideration.

Warm regards,

Quoc Anh Trinh (Andrew)
