To the AustralianSuper Hiring Team,

As an AI Engineer specialising in agentic systems within the strictly regulated banking sector, I was immediately drawn to the **AI Engineer (Agentic)** role at AustralianSuper. I share your passion for building intelligence layers that go beyond task execution to enable true reasoning and planning. My background at Bendigo & Adelaide Bank has been defined by exactly this: engineering the decision-making and reasoning layers that transform complex regulatory data into actionable insights for the Fund's members.

In my current role within Financial Crime Risk, I am leveraging Agentic AI to bridge the gap between static regulation and active, high-performance monitoring. I recently engineered a **typology extractor** that utilized autonomous agents to transform 156 complex AUSTRAC guidance documents into 198 structured typologies. This project was not just about data extraction; it was an exercise in designing a reasoning framework that allows AI systems to interpret context, plan actions, and adapt to evolving regulatory landscapes.

My alignment with the Hyperautomation team's mission is further evidenced by:

- **Productionizing Intelligence:** I co-delivered an **AI-driven UAR-to-SMR pipeline** implementing secure **masking/rehydration** and **Pydantic-validated LLM prompting**; this reduced report prep time by **80%** and shifted the focus toward strategic oversight.
- **RAG & Tool Orchestration:** I have built production solutions using **Python and LlamaIndex**, designing domain-aware agent workflows for the **AUSTRAC Knowledge Hub**. This included architecting specialized agents for **typology extraction**, an **AML/CTF Program gap finder**, and a **conversational Q&A interface** for querying complex regulatory logic with full auditability.
- **Safe-Autonomy in Regulated Environments:** Working in a "risk control-first" banking environment, I have developed a deep understanding of deploying AI with appropriate guardrails, governance, and auditability—ensuring **99.9% logic alignment** and data integrity.

I am a builder who thrives in ambiguity and enjoys the abstract problem-solving required to design goal-driven decision logic. AustralianSuper's commitment to delivering better outcomes for its 3 million members through innovation is a mission I am eager to support with my technical expertise in autonomous AI systems.

Thank you for your time and consideration. I look forward to the possibility of discussing how my experience in engineering reasoning agents for the financial sector can help AustralianSuper define the next generation of member-focused AI systems.

Sincerely,

Quoc Anh Trinh (Andrew)
