Hiring Manager
Data, Analytics & Insights Team
UniSuper

Dear Hiring Manager,

I am writing to apply for the **Senior Data Analyst** role within UniSuper's data, analytics and insights function. With over five years of experience as a data analyst in financial services — specialising in Power BI, SQL, Python, and cloud-based analytics — I am drawn to this role because of the purpose it serves: helping Australians achieve great retirement outcomes through trusted, high-quality data.

UniSuper's position as one of Australia's most respected superannuation funds, managing over \$139 billion on behalf of its members, reflects an organisation that takes its responsibilities seriously. I am particularly attracted to a culture built on genuine care, collaboration, and a passion for outcomes — values that resonate with how I approach my work. The opportunity to contribute to an Enterprise Data Platform and help mature self-service analytics capabilities across a complex, member-focused organisation is exactly the kind of challenge I am looking for.

In my current role at Bendigo & Adelaide Bank, I lead the intelligence and analytics function within Financial Crime Risk, working across the full data lifecycle from requirements translation through to stakeholder-facing insights. My experience maps directly to what UniSuper is seeking:

Power BI design and delivery: I design, build, and maintain Power BI dashboards serving operations, transformation, and governance stakeholders. My dashboards eliminated 70% of ad-hoc reporting requests and reduced prioritisation time by 60% — outcomes that required both strong technical execution and an understanding of what business users actually need.

SQL and Python proficiency: I apply SQL and Python daily to build complex datasets, engineer automated workflows, and solve problems that span both analytics and data engineering. This includes vendor-agnostic transaction monitoring scenarios processing 150+ alerts daily with 99.9% data integrity, and automated reporting pipelines using NLP and LLMs that reduced regulatory preparation time by 80%.

Translating business needs into data solutions: I work closely with compliance, operations, and assurance stakeholders to understand requirements and turn them into scalable, reusable data assets. I have also contributed to data model design and supported assurance testing of 40+ scenarios during a major bank migration — requiring close coordination with both business and technical teams.

Promoting data literacy and self-service: Beyond my core role, I have tutored over 100 students in SQL and Python, and I take a deliberate approach to building analytical capability in those around me. Helping non-technical stakeholders interpret and trust data is something I find genuinely rewarding.

Financial services experience: My experience at Bendigo & Adelaide Bank and Remitano (an international cryptocurrency exchange) has given me strong grounding in financial data environments — where accuracy, auditability, and stakeholder trust are non-negotiable. While my background is in banking rather than superannuation, the data challenges — regulated reporting, member-level analysis, performance monitoring — are closely aligned.

I hold a **Master of Business Analytics from Deakin University** and have hands-on experience with cloud platforms including AWS (Redshift, Glue) and exposure to Azure-based tooling. I am actively building familiarity with Databricks and the broader Azure data ecosystem, which I understand is part of UniSuper's platform direction.

I am genuinely excited about the opportunity to contribute to UniSuper's data and analytics journey — not just as a technical practitioner, but as someone who believes that better data leads to better decisions and, ultimately, better outcomes for members. I would welcome the opportunity to discuss how my background can support your team.

Thank you for considering my application. I am available at your convenience for an interview.

Warm regards,

Quoc Anh Trinh (Andrew)
